

Japan patent No. 11-49255 (1999.02.23)

(Project)

Provide a low- cost cartridge style instrument that comprises a simple automatic opening and shutting device.

(Solution Method)

The lid 2 is characterized by:

an outward instrument 1 that comprises an entrance part 4 with a spacious entrance that joins by insertion with the lid 2 and an instrument body 3 with a container-shaped bottom, a cartridge-style pressing instrument comprised of inside instrument 10, which has been received to make sinking possible and to make connection/ separation within instrument body 3 without any restrictions, and an envelope 12 located in the underside of the pressing plate 11, formation of a hole 15 that passes up and down through the pressing plate 11 mentioned above, and the installation of the automatic opening and shutting device that comprises a duct 18 that possesses the outlet 17 that opens up the traffic through the hole 15 for the sticking part of the plastic film 16 that covers the hole 15 mentioned above.
